## ABSTRACT OF THE DISCLOSURE

A wireless communication apparatus is provided in which a frequency band, a signal type, and a transmission power conforming to radio law of a country that uses a first wireless communication system are set by means of a receiving status of a specific signal of a second wireless communication system, so that user friendly wireless communication apparatus regarding operations thereof can be provided. In the wireless communication system 1 according to the present invention, an area information acquisition portion 2 acquires information on an area in which the wireless communication system presently exists. Based on communication setting information in the wireless communication system corresponding to area information stored in an information memory portion 4, an area information judgment portion 3 judges communication setting information capable of being set in the wireless communication system in accordance with the area information acquired from the area information acquisition portion 2. Based on the communication setting information judged by the area information judgment portion 3, communication parameter control setting portion 5 controls communication settings of the wireless communication system.

**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-4 have been allowed.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest a wireless communication system which can perform wireless communication with another wireless communication system, comprising: an area information acquisition unit configured to acquire information on an area in which the wireless communication system presently exists; a memory unit ~~for storing~~ configured to store communication setting information on the wireless communication system corresponding to said area information; an area information judgment unit configured to judge the communication setting information which can be set in the wireless communication system based on the area information acquired from said area information acquisition unit; and a communication control unit configured to control communication settings in the wireless communication system based on the communication setting information judged by said area information judgment unit, and to control the communication settings by selecting frequency bands, signal parameters, and transmission power output values associated with different areas in which the wireless communication system can be used as cited in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
